

Ideation Phase Brainstorm & Idea Prioritization Template

Date	31 January 2025
Team ID	SWTID-2026-3138
Project Name	ComicCraft - AI Comic Story Creator using Gemini Models
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Below, the ComicCraft team applied the template to decide what the AI comic story creator should do.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Problem statement (How might we...?)	How might we help anyone, even people who can't draw, turn a simple story idea into a complete, personalized and illustrated comic that they can preview and download as a PDF?
Team gathering	Team members meet (in person or online) to share ideas on the ComicCraft problem statements: non-artists find it slow and hard to create comics, and existing tools give generic results that are hard to customize.
Goal of the session	Decide which features and AI components ComicCraft should include and which should be built first.
Key rules followed	Stay on topic. Defer judgment. Go for volume. Encourage wild ideas. Listen to others. If possible, be visual.

Step-2: Brainstorm, Idea Listing and Grouping

Ideas listed during the brainstorm:

No.	Idea
1	Input form for story prompt, character name, setting, tone and art style
2	Use Gemini 1.5 Flash to quickly create a panel-by-panel outline
3	Use Gemini 1.5 Pro for creative narration and character dialogue
4	Use Stable Diffusion to generate a comic-style image for each panel
5	Keep the main character looking the same across all panels
6	Add speech bubbles and captions directly on the panel images
7	Live comic preview page before downloading
8	Export the full comic as a PDF with a timestamped file name
9	Regenerate the whole comic with a different tone or art style
10	Regenerate or edit only a single panel
11	Art style presets such as anime, comic book, realistic and watercolor
12	Let the user choose the number of panels

No.	Idea
13	Suggested story prompts for users who are stuck
14	Progress or loading indicator while the comic is generated
15	JSON API endpoints along with the web form
16	Share link or social sharing of the finished comic
17	User accounts with saved comic history
18	Multi-language stories
19	Text-to-speech narration for each panel
20	Content filter to keep stories kid-friendly

Ideas grouped into themes:

Group A: Story generation	Gemini Flash outlines, Gemini Pro narration and dialogue, panel count selection and suggested prompts.
Group B: Visual generation	Stable Diffusion panel images, art style presets, a consistent main character and speech bubbles on panels.
Group C: Personalization and iteration	Input form for character, setting, tone and style, plus regenerating the whole comic or a single panel.
Group D: Preview, export and sharing	Live preview, timestamped PDF export, JSON API endpoints and a share link.
Group E: Extras and safety	Progress indicator, kid-friendly content filter, user accounts and history, multi-language stories and text-to-speech.

Step-3: Idea Prioritization

Ideas were placed by importance (the most positive impact for users) and feasibility (cost, time, effort and complexity).

	Lower feasibility	Higher feasibility
Higher importance	Plan carefully (next) - Consistent main character across panels - Speech bubbles on panel images - Regenerate or edit a single panel	Do first (core MVP) - Input form (prompt, character, setting, tone, style) - Gemini Flash panel outlines - Gemini Pro narration and dialogue - Stable Diffusion panel images - Live comic preview - PDF export - Regenerate with a different tone or style
Lower importance	Later or skip - User accounts and saved history - Multi-language stories - Text-to-speech narration - Share link or social sharing	Quick wins - Art style presets - Panel count selector - Suggested story prompts - Progress indicator - JSON API endpoints - Kid-friendly content filter

Outcome: the team will build the Do first group as the core ComicCraft workflow, add the quick wins where time allows, and plan the remaining ideas for later.
