

AI comic story creation

SCENARIO	Entice			Enter			Engage			Exit			Extend			
Entering a story idea, generating, previewing, and downloading an AI-made comic	How does someone initially become aware of this process?			What do people experience as they begin the process?			In the core moments in the process, what happens?			What do people typically experience as the process finishes?			What happens after the experience is over?			
Steps	Get a story idea	Open ComicCraft	See the input form	Describe the story	Pick setting, tone & style	Submit the form	Wait for generation	Review the preview	Tweak & regenerate	Download the comic	PDF is saved	See export success	Print or share	Start a new comic	Use the API	
What does the person typically experience?	A user wants to turn an idea, like a brave fox in an enchanted forest, into a comic	The user opens the web app and lands on the home page (index.html)	The form asks for a story prompt, character name, setting, tone, and art style	The user types a story prompt and names the main character	They choose a setting (e.g., forest), tone (e.g., dramatic), and art style (e.g., anime)	The form is sent by POST to the /generate route	Gemini Flash writes a 5-panel outline, Gemini Pro adds narration and dialogue, Stable Diffusion draws each panel	The preview page shows each panel's title, image, scene description, and narration	If it is not right, the user changes the tone or art style (e.g., funny, comic book) and regenerates	The layout is assembled and exporters.py builds a PDF with FPDF	The PDF is saved with a timestamped filename in static/exports	The user is redirected to a page confirming the download	The user prints or shares the PDF with friends, family, or classmates	From the success page, the user returns to create another story	Developers send JSON to /generate-comic/json to get layout data and a PDF path	
Interactions	Web browser; the user's own imagination	Web browser; home page served by FastAPI	index.html form with a field for each input	Story prompt and character name text fields	Setting, tone, and art style fields	Submit button; FastAPI /generate route	Gemini Flash, Gemini Pro, and Stable Diffusion; loading state in the browser	comic_preview.html page in the browser	Input form again; /generate runs the full pipeline	Download button; layout_builder.py and exporters.py	static/exports folder on the server	export_success.html page	PDF viewer, printer, email, or chat apps	index.html (home page)	JSON API client; /generate-comic/json and /docs	
Goals & motivations	Help me turn my idea into a real comic without drawing skills	Help me get started quickly with no setup	Help me know what details to give	Help me describe my story in my own words	Help me make the comic match my creative vision	Help me feel sure my request went through	Help me know the comic is being made and roughly how long it will take	Help me see if the story and images fit my idea	Help me change the mood or style without starting over	Help me save my comic in a format I can keep	Help me find my saved file	Help me feel confident the download worked	Help me show my comic to other people	Help me create more stories	Help me connect ComicCraft to my own tools	
Positive moments				The form is short, with only five fields	Writing a prompt is a fun, creative moment	Choosing tone and style gives a sense of control	Seeing the story and illustrations appear for the first time is exciting		Every regeneration gives a fresh, unique comic	Getting a professional-looking PDF to keep		Sharing a finished comic is rewarding			It is easy to jump into another story	
Negative moments	Users may be unsure what makes a good story prompt						Waiting for images to generate can feel long	Characters may look slightly different from panel to panel	Regenerating reruns everything, so the user waits again							
							If an AI call fails, the user may end up with no comic	An image may not match its scene description								
Areas of opportunity	Add example prompts to help users get started			Offer tone and art style presets with sample thumbnails			Show progress, such as 'Drawing panel 2 of 5'	Let users edit panel text or redo a single panel	Keep a consistent character description so the hero looks the same in every panel	Offer more export options, like PNG images or a share link		Save past comics in a gallery for each user			Document the API with sample requests and responses	
How might we make each step better? What ideas do we have?
